# **Affordable, high quality photography and video services and virtual tours for real estate**

We will take still and 360-degree panoramic photos, create an interactive virtual tour, and host it on our servers or create a version that you can run on your own server(s).

For each property we will create branded (with your and broker's information) and non-branded (for homes.com and MLS listing) version of the tour.

The tour will be posted on the property MLS listing and we will provide you with high resolution photos that you can print or post to your listings. One-page property flyer and e-brochure will be created for the property.

The link to the virtual tour will be added to the property listing on *realtor.com* and *homes.com* and the virtual tour will be submitted to a number of other real estate portals.

We will also create and post a *YouTube* video of the tour.

We keep track and report all activities with your virtual tour.

We will take a professional video tour of your property with or without narration and create branded and un-branded video and post it to YouTube. It also can be used as a virtual tour, instead or in combination with still and 360-degree panoramic photos.

We are located in Belchertown, MA and primarily serve western and central Massachusetts (Hampshire, Hampden, Franklin and Worcester counties), but will travel to other locations (travel charges apply).

Please contact us for additional information, to schedule a presentation at your office or to order our service.

Visit our web page to see an example of a virtual tour or to download documents with additional information and prices.
